1. The 1.116 amendment filed on 10/1/04 has now been entered in the RCE application.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art Fig. 9 in view of Nagai and further in view of either Ishikawa et al or Goto et al.

See paragraph three of the previous office action for the details of this rejection. As to the new limitation that the FBARs have top and bottom electrodes, with the top electrode having a coplanar wave-guide structure, this does not define patentably over applicant's admitted prior art Fig. 9 in view of Nagai when taken with either Ishikawa et al or Goto et al.

These two newly cited references each show the well-known FBAR structure having top and bottom electrodes, with the top electrode having a coplanar wave-guide structure. The motivation for using this structure for forming the FBARs of the admitted prior art is simply to obtain the benefits/advantages taught by both Ishikawa et al and Goto et al.
